

SafetyLine

LONE WORKER

Canada's leading supplier
Setting the Standard since 1999

The proactive SafetyLine™ service is designed to effectively monitor Worker Safety 24hours per day. This automated system reduces costs & resources, and eliminates human error. Available as a simple managed service, SafetyLine is persistent, totally mobile, portable and works with existing devices (*mobile phones, Blackberries, computers, etc..*).

Remote workers regularly Check-In to the system and report "OK." If a worker misses a Check-In reminder, SafetyLine will contact responders with all information (*emergency status, audio, GPS location, history, etc..*). Workers can also declare a Panic, but SafetyLine does not rely on a distressed person's ability to reach and press a button.

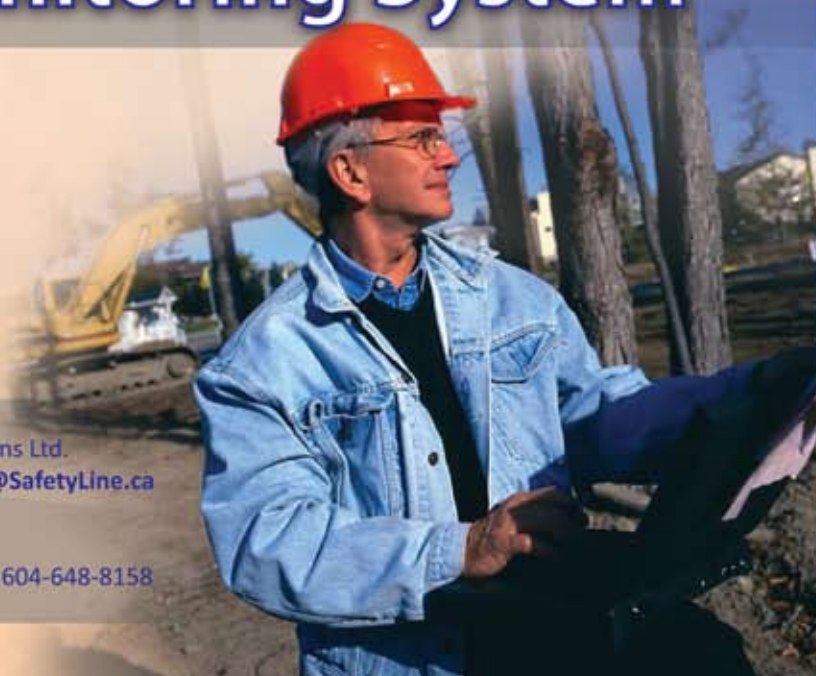

SafetyLine does not interfere with workers doing their jobs, and is flexible on-the-go to meet the real concerns of worker safety.

Contact us to see how SafetyLine can help you meet Moral & Regulatory obligations, while saving you money.
